

Greenhouse Emissions Reporting

# Abigroup Selects Ndevr's Greenhouse Emission Reporting Solution

Abigroup Limited is a major Australian engineering and building construction group. Abigroup's reputation as a leading multi service construction company has been earned through its commitment to delivering quality products, extensive experience and its committed team members, who are recognised as industry leaders.

Abigroup is also recognised for its commitment to the environmental concerns of the communities in which it undertakes projects. As part of managing its Corporate Social Responsibility commitments, as well as the legislative requirements recently imposed under the National Greenhouse & Energy Reporting Act - Abigroup selected Ndevr's Greenhouse Emissions Reporting Solution to provide it with the intelligence needed to reduce its environmental footprint.

Ndevr's Greenhouse Emissions Reporting solution was compared against other options – for example, developing a solution internally. However, it was found that the ease with which Ndevr's solution could be implemented, while at the same time minimising the impact on existing business processes, far outweighed the time and costs involved in internal development, or the integration of an alternative solution.

*"There is nothing else in the market that matches the functionality of the Ndevr Greenhouse Emission Reporting solution, or that is integrated into JD Edwards,"* said Alison Woodward, Group Manager of Information Systems at Abigroup Limited.

*"Data is collected at the lowest level which means that there is minimal impact on our existing business processes, while at the same time, Ndevr's solution allows us the opportunity to aggregate with our sister companies' data to produce a group report."*

*"Abigroup has been working with Ndevr for several years now, and we have always been impressed with the integrity of Ndevr and their corporate values. Also the team of people implementing the solution are known to us already. We have found Ndevr a good company to work with and of course this has also strongly influenced our decision to utilise their Greenhouse Emissions Reporting solution to satisfy both our legislated and internal reporting requirements."*
