

Greenhouse Emissions Reporting

Thiess Selects Ndevr's Greenhouse Emissions Reporting Solution to Enable Reporting Under NGER Legislation

Thiess is a leading mining, construction and services contractor with diverse operations throughout Australia and selected international markets.

As an organisation, Thiess is committed to sustainability and environmental responsibility across all its business units, and believes that continual improvement in environmental performance will be achieved by setting objectives, measuring progress and communicating results.

They are also facing the National Greenhouse Energy Reporting challenge for the first time this year.

The National Greenhouse Energy Reporting Act 2007 requires organisations and facilities whose energy production, energy use or greenhouse gas emissions meets certain thresholds, to submit comprehensive auditable reports back to the Department of Climate Change.

Thiess has so far been gathering the data required for Emissions Reporting predominantly through manual processes, which is neither auditable, nor secure - as required by The Act.

The other challenge for an organisation with multiple business units, spread across multiple states - such as Thiess - is that the different emissions factors being used must also be recorded and stored alongside the data for 7 years. With this much data needing to be captured, recorded, tracked, and reported on, it made sense for Thiess to automate the process.

"Ndevr was selected by Thiess to provide our emissions reporting solution because it was significantly better value for money than the other solutions being presented to us, while at the same time it was able to be fully integrated with our other systems." "Ndevr's NGER solution was also attractive because it has been written around the Australian legislation."

(Ian Wade, Executive General Manager, Thiess Business Services)

Ndevr's NGER software is the only reporting tool to integrate with a company's existing data system, enabling organisations to comply with Australia's carbon emission reporting laws.

NGER has been developed within both Oracle E-Business Suite and Oracle JD Edwards EnterpriseOne. NGER is also available as a stand-alone solution which is able to be fully integrated with an existing non Oracle ERP system - while minimising additional business processes.
